TANK LEVEL MONITORING SYSTEM

CONTROL SOLUTIONS FROM ADVANCED TELEMETRICS

The View 1000 from Advanced Telemetry is a tank level monitoring system designed to make production workflows safer, more efficient and more cost-effective. The View 1000 is engineered to be versatile from the ground up with easy installation and flexible power supply options.

Once the View 1000 is installed and connected to our 1000S Digital Tank Gauges the LED display provides current information like tank inventory levels and product temperature. All inventory details can be monitored from the View 1000 panel which eliminates the hazardous practice of manually climbing tanks to gauge inventory levels. The View 1000 system is designed to be mounted at a safe operating distance from storage tanks and potentially deadly H₂S exposure.

TANK LEVEL MONITORING SYSTEM

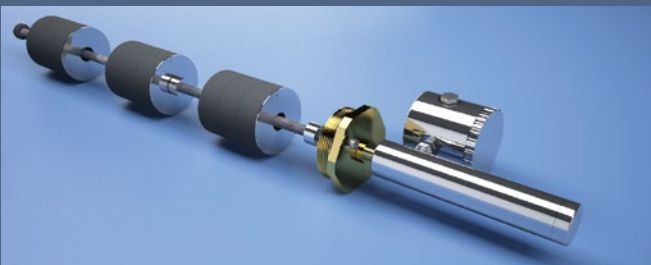

View 1000 Benefits

- Eliminate manual tank gauging
- Limit exposure to environmental and safety hazards
- Improve inventory management
- Improve employee productivity
- Designed for a variety of industries and applications
- Local display of level and temperature
- Customizable from 1-15 tanks
- Customizable AC/DC power with battery backup and solar option
- Single or dual liquid level measurement

Compatible with 1000S Digital Tank Gauge

- Level measurement accuracy to .10 inch
- Class 1, Division 1, Groups C, D
- Zero calibration and zero drift
- Non-classified wireless option

Distributed by:

Expansion Option: Intellect SCADA

- 24/7 access to all your tank levels
- Access data from anywhere around the world
- Email, text, mobile phone alarming option
- Daily, weekly, and monthly reporting option
